ACKNOWLEDGEMENTS

CHAPTER 1 GENERAL DESIGN CONSIDERATIONS

1.1	Design aims	1
1.2	Introduction to BS EN 1990	1
1.3	Limit state design	2
	1.3.1 Ultimate limit states	2
	1.3.2 Serviceability limit states	3
	1.3.3 Structural integrity	3
	1.3.4 Durability	4
1.4	Actions – Eurocodes	4
1.5	Design basis for structural steelwork	5
1.6	Steel structures – Eurocode 3	8
	1.6.1 Structural analysis	8
	1.6.2 Sway stiffness	11
1.7	Steel design strength	12
1.8	Structural integrity	13

CHAPTER 2 RESISTANCE OF CROSS-SECTIONS

2.1	Local buckling	15
2.2	Classification	15
	2.2.1 Classes of cross-sections	15
	2.2.2 Classification process	17
2.3	Example 2.1 – Section classification	23
2.4	Classification of UB and UC sections	25
2.5	Shear resistance	26
2.6	Bending resistance	27
2.7	Example 2.2 – Beam with full lateral resistant	28

CHAPTER 3 BUCKLING RESISTANCE OF BEAMS

3.1	Design considerations	32
3.2	Buckling resistance of laterally unrestrained beams	33
	3.2.1 Reduction factor for lateral-torsional buckling	34
	3.2.2 Non-dimensional slenderness for lateral-torsional buckling	35
3.3	Example 3.1 – Simply supported beam with lateral restraint at load points	39
3.4	Resistance of webs to transverse forces (web buckling and bearing)	43
3.5	Web stiffeners	46
3.6	Example 3.2 – Web subject to transverse forces	47
3.7	Example 3.3 – Web stiffener	49

CHAPTER 4 MEMBERS IN TENSION

4.1	Resistance of cross-section	53
4.2	Resistance of angles connected by one leg	54
4.3	Example 4.1 – Angle connected by a single leg using two rows of bolts	55
4.4	Members subject to bending and tension	56

CHAPTER 5 MEMBERS IN COMPRESSION

5.1	Resistance of cross-section	58
5.2	Buckling resistance	58
5.3	Slenderness	59
5.4	Buckling length, L_{cr}	61
5.5	Buckling curves	62
5.6	Example 5.1 – Simple compression member	64
5.7	Example 5.2 – Simple compression member restrained at mid-height	66
5.8	Buckling resistance of members in bending and axial compression	68
5.9	Columns in simple construction	69
5.10	Example 5.3 – Column under axial compression and bending	71
5.11	Example 5.4 – Columns in simple construction	75

CHAPTER 6 TRUSSES

6.1	Introduction	81
6.2	Typical uses	81
6.2.1	Spans	81
6.3	Design concept	82
6.3.1	Roof arrangement	82
6.3.2	Pre-cambering	83
6.3.3	Typical sections	83
6.3.4	Joint resistances	85

GENERAL DESIGN DATA

Bending moment and deflection formulae for beams	88
Moving loads	99
Fixed end moments	102
Trigonometrical formulae	103
Solution of triangles	104
Properties of geometrical figures	106
Metric conversions	114

EXPLANATORY NOTES

1.	General	116
2.	Dimensions of sections	117
3.	Section properties	118
4.	Introduction to resistance tables	125
5.	Bending tables	126
6.	Resistance to transverse force tables (Web bearing and buckling)	128
7.	Tension tables	129
8.	Compression tables	130
9.	Bending tables	138
10.	Axial force and bending tables	138
11.	Bolts and welds	142
12.	Section designations and steel grades	147

Yellow Pages**TABLES OF DIMENSIONS AND GROSS SECTION
PROPERTIES**

Universal beams	156
Universal columns	162
Joists	164
Parallel flange channels	166
ASB (Asymmetric Beams)	168
Equal angles	171
Unequal angles	172
Equal angles back-to-back	174
Unequal angles back-to-back	175
Tees cut from universal beams	176
Tees cut from universal columns	180
Hot-finished circular hollow sections	182
Hot finished square hollow sections	186
Hot-finished rectangular hollow sections	190
Hot-finished elliptical hollow sections	197
Cold-formed circular hollow sections	198
Cold-formed square hollow sections	201
Cold-formed rectangular hollow sections	204

S355****MEMBER RESISTANCES**

Universal beams subject to bending	210	326
Universal columns subject to bending	213	329
Joists subject to bending	214	330
Parallel flange channels subject to bending	215	331
Universal beams – web bearing and buckling	216	332
Universal columns – web bearing and buckling	225	341
Joists – web bearing and buckling	228	344
Parallel flange channels – web bearing and buckling	229	345
Equal angles subject to tension	231	347
Unequal angles subject to tension	234	350
Universal beams subject to compression	240	356
Universal columns subject to compression	249	365
Parallel flange channels subject to compression	252	368
Equal angles subject to compression	256	372
Unequal angles subject to compression	258	374
Universal beams subject to combined axial load and bending	263	379
Universal columns subject to combined axial load and bending	291	407
Joists subject to combined axial load and bending	301	417
Parallel flange channels subject to combined axial load and bending	305	421

BOLT RESISTANCES

Non preloaded bolts – hexagon head	309	425
Non preloaded bolts – countersunk	312	428
Preloaded bolts at serviceability limit state – hexagon head	315	431
Preloaded bolts at ultimate limit state – hexagon head	317	433
Preloaded bolts at serviceability limit state – countersunk	319	435
Preloaded bolts at ultimate limit state - countersunk	321	437

FILLET WELDS

Design weld resistances	323	439
